Email: _____

The easiest way to measure the attic access is to measure the door. If you are happy with how the door fits when seated within the attic access, remove the door and measure its length and width. Otherwise measure the opening above the molding that retains the door. Measure To Nearest 1/16"; Round Down If Uncertain.

- Molding supporting door < 1/2"?
- If the molding is > 1/2" please record dimension _____

Place a ✓ check mark in the figure which corresponds most closely to the orientation of your attic access.

Cord location,
check-box & circle
coordinates of:
 wire come-through, or
 leave in attic
